PRODUCTS™**

APPLICATION RATES

Any of our products can be broadcast on the surface of the turf, bare soil before seeding, or after aerification events to help with incorporation.

SO4

The most accurate way to determine an application rate considers the problem being addressed (sodic soils, sulfur fertility or general soil amending), soil test results and utilizes our SO4 calculators, which are available upon request. Multiple applications per year are often used to maintain a supply of soluble calcium and sulfur.

Typically, rates of 10 to 20 lbs/1000 ft² are used to address soil quality concerns and provide adequate sulfur fertility. Higher rates could be necessary to address sodic soils depending on the severity.

SO4 HUMIC

To provide maximum benefits from SO4 Humic, 5 lbs/1000 ft² should be used, one time per year, spring or fall. Excessive applications of humic acids can be detrimental to plant health.

98G

A recent soil test combined with our calculator (available on the website) is the most accurate way to determine the application rate. 98G can be applied at any time during the season; multiple applications per year are often utilized to split large corrective rates.

In general, maintenance pH rates of 5 to 10 lbs/1000 ft² can be used to negate the acidifying effects from nitrogen fertilizer usage.

Calcium Products pelletizes the purest most effective calcium-based fertilizer, which maximizes soil productivity resulting in aesthetically pleasing and durable turfgrass. Most importantly, Calcium Products is committed to steadfast customer support.

OUR BELIEFS

CONTINUOUS IMPROVEMENT

Calcium Products was founded on the belief that there is a better way. This belief drives us to continuously improve our customer experience, products and operational performance.

RELATIONSHIPS

At Calcium Products, we believe in the value of strong, long-term relationships that are built on trust. We aim to clearly communicate and work hard to deliver on our commitments. Most importantly, we are steadfast with our relationships through thick and thin.

TECHNOLOGY

Advancements in technology aid customers in delivering increased profitability. At Calcium Products, we align our products and services with these technologies to deliver the best support to our customers.

TURF
PRODUCTS

**CALCIUM
PRODUCTS™**

SO4 is the purest and most soluble pelletized gypsum that handles easily and quickly improves soil structure including the repair of sodic soils.

Superior Solubility.

SO4 dissolves and solubilizes quickly to rapidly improve soil structure issues without disrupting the appearance and playability of turfgrass. The superior solubility of SO4 is achieved through our proprietary production process, which includes a very fine grind of raw gypsum material.

Product Solubility Ratings

Highest Purity. SO4 is manufactured from one of the purest sources of dihydrate gypsums in the world.

Easy Application. SO4 pellets are manufactured in three sizes specifically for turfgrass applications. It flows well and spreads evenly with very little dust.

PRODUCT ANALYSIS

21% Calcium / 17% Sulfur
 Bulk Density = 61 LBS/CU FT
 Available in standard, mini and micro sizes:
 Standard SGN Average: 300
 Mini SGN Average: 120
 Micro SGN Average: 50

SO4 Humic is the purest and most soluble pelletized gypsum and humic acid blend. It quickly increases root mass and improves soil structure to promote nutrient uptake and stress tolerance.

Superior Solubility. SO4 Humic dissolves and solubilizes to increase plant root mass and rapidly improve soil structure issues. The superior solubility of SO4 Humic is achieved through our humic acid source and proprietary production process, which includes a very fine grind of raw gypsum material.

Highest Purity. SO4 Humic is manufactured from an extracted, highly soluble humic acid powder and one of the purest sources of dihydrate gypsum in the world.

Easy Application. SO4 Humic pellets are manufactured in two sizes specifically for turfgrass applications. It flows well and spreads evenly with very little dust.

PRODUCT ANALYSIS

18% Calcium / 15% Sulfur / 2% Humic Acid
 Bulk Density = 61 LBS/CU FT
 Available in standard and mini sizes:
 Standard SGN Average: 300
 Mini SGN Average: 120

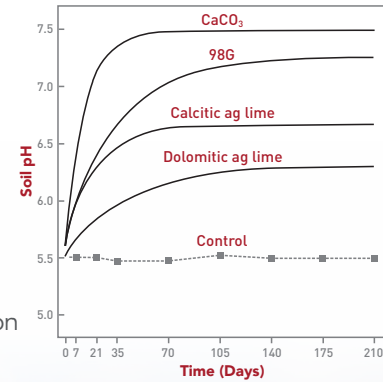

98G is the most reactive and purest pelletized, high-calcium limestone that handles easily to quickly correct and maintain soil pH.

Superior Reactivity.

98G dissolves and reacts quickly to correct soil pH and deliver 36% calcium without disrupting the appearance and playability of turfgrass. The superior reactivity of 98G is achieved through our proprietary production process, which includes a very fine grind of the raw limestone material.

Reactivity of Liming Materials

Highest Purity. 98G is manufactured from 98% pure calcitic limestone, which is one of the purest in the world.

Easy Application. 98G pellets are manufactured in two sizes specifically for turfgrass applications. It flows well and spreads evenly with very little dust.

PRODUCT ANALYSIS

38% Calcium / <0.5% Magnesium
 Bulk Density = 72 LBS/CU FT
 Available in standard and mini sizes:
 Standard SGN Average: 300
 Mini SGN Average: 120

21% CALCIUM | **17% SULFUR**
 BULK DENSITY = 61 LBS/CU FT

18% CALCIUM | **15% SULFUR** | **2% HUMIC ACID**
 BULK DENSITY = 61 LBS/CU FT

38% CALCIUM | **<0.5% MAGNESIUM**
 BULK DENSITY = 72 LBS/CU FT
